GRANITE MATERIALS

Durable aggregate, delivered direct to your site

| GRANITE MATERIALS

Granite is a hard natural stone valued for its strength, angular texture, and color range — from white and light gray to pink.

ODG stocks five granite products covering everything from fine base material to heavy riprap for erosion control.

Granite Rock

[Call for screened sizes](#)

Durable, attractive screened granite composed of feldspar, quartz, mica, and other minerals. Angular texture locks together well and resists shifting under load.

Decorative landscape beds

Driveways & pathways

Residential construction

△ Color ranges from white-gray to pink depending on source.

Granite Base

[0" x 2" · 0" x 3"](#)

A crushed blend from dust (0") up to the specified maximum size. The fine-to-coarse mix binds tightly under compaction, creating a stable road or foundation layer.

Driveway foundations

Road base & subbase

Building pad prep

Decomposed Granite (DG)

[0" - 1"](#)

Fine-grade granite mixed with natural dust that bonds well underfoot. When compacted, it forms a hard, permeable surface with a natural appearance.

Pathways & walkways

Parking areas

Xeriscape gardens

Granite Bull Rock

[2"-6" \(call for availability\)](#)

Consistently sized, angular granite chunks that interlock under heavy traffic. A staple for construction entrance pads that protect pavement from tracked-out debris.

Construction entrance pads

Erosion control

Drainage areas

Granite Rip Rap

[6"-36+"](#)

Large, irregular granite stones for slope stabilization and erosion control. The irregular shape allows pieces to nestle together and resist hydraulic forces.

Slope & hillside protection

Streambank stabilization

Channel lining

APPLICATIONS & PROJECT GUIDE

How Contractors & Homeowners Use Granite Products

Driveway Base

Granite Base (0"×3") laid 4" deep and compacted provides a firm, durable driveway foundation that doesn't shift or rut under vehicle loads.

Construction Entrance Pad

Granite Bull Rock (2"–6") at 6" depth meets many site-plan requirements for construction entrance pads and significantly reduces mud tracking onto public roads.

Xeriscape Pathways

Decomposed Granite (0"–1") is the go-to for Texas xeriscape — permeable, low-maintenance, and visually natural against native plantings.

Erosion Control

Granite Rip Rap (6"–36"+") is used to armor slopes, creek banks, and culvert outfalls against erosion from stormwater runoff.

Pro Tips Before You Order

Order extra for compaction

Compactable granite products (Base, DG) lose 15–20% of their loose volume when properly compacted. Order at least 15% more than your calculated cubic yards.

Confirm color before delivery

Granite color varies by quarry source — ranging from near-white to pink-gray. ODG can describe current stock color before scheduling delivery.

READY TO ORDER?

CONTACT ODG FOR PRICING & DELIVERY

Tell us your material, approximate quantity, and delivery address. We'll confirm availability, pricing, and lead time — usually same call.
