AGGREGATES · MATERIAL GUIDE

LIMESTONE MATERIALS

The backbone of Texas construction — in every grade

LIMESTONE MATERIALS

Limestone is widely selected for its availability, strength, flexibility, and natural appearance, supporting driveways, sites, and landscaping across Greater San Antonio.

Spec Base

0"-¾" · 0"-1" · 0"-2" · 0"-3"

TXDOT-style gradation produced to consistency testing requirements. The dust-to-coarse blend compacts to a dense, load-bearing surface required for city, county, and DOT work.

City-standard driveways

Road subbase & base course

Building pads

Bull Rock

Call for availability

Large, angular limestone chunks used for retaining wall drainage, construction entrance reinforcement, and landscape applications requiring visible mass.

Retaining wall drain backfill

Construction entrance pads

Erosion control

Flex Base

Approximately advertised size — not regulated

Similar blend to Spec Base at a lower price point. Not regulated to the same testing standard, but performs well for private driveways, parking areas, and general-purpose base.

Private driveways

Farm & ranch roads

Parking areas

Rip Rap

Call for sizing options

Heavy limestone rock used to protect shorelines, slopes, and structures from erosion. The irregular shapes interlock, dissipating wave and flow energy.

Slope & bank protection

Drainage channel lining

Pond & lakefront stabilization

Screened Rock

¾" · 1" · 1½" · 2" · Grades 3-7 · #57

Clean, crushed limestone screened to a specific size range. #57 is the industry standard for drainage applications. Larger sizes suit topping and decorative uses.

Driveway surface topping

French drains & drainage beds

Pipe bedding (#57)

Caliche

Call for availability

Naturally occurring calcium carbonate material found in Texas subsoil. A cost-effective base material for low-traffic roads and rural applications.

Rural roads & private drives

Agricultural applications

Large-area grading fill

APPLICATIONS & PROJECT GUIDE

How Contractors & Homeowners Use Limestone Products

Driveway Build-Up

Start with 4" of Flex Base compacted, then top with 2" of ¾" Screened Rock for a finished residential driveway that handles everyday traffic.

Road Base

Spec Base (0"×3") laid and compacted per TXDOT specifications is required for most city-adjacent and permitted construction projects in Greater San Antonio.

French Drain

#57 Stone is the standard drainage aggregate for French drain trenches. Its angular, open-graded structure allows water to flow freely while supporting pipe.

Erosion Control

Rip Rap placed on cut slopes and drainage channels prevents surface erosion. Work with your engineer to determine correct stone sizing for flow velocity.

Pro Tips Before You Order

Spec vs. Flex: know the difference

Spec Base must meet gradation and plasticity index testing standards — required for city projects. Flex Base is untested and acceptable for private work only.

Screened sizes vs. base material

Single-size screened rock (¾", 1", #57) does not compact like base — it stays loose and drains. Use for drainage, topping, or decoration, not as a structural base.
